

HEAVY DUTY CLEANER

BENEFITS

- Specially formulated to safely clean and maintain rubber and vinyl escalator handrails
- Formulated and tested for cleaning and maintenance of rubber and vinyl
- Ready-to-use

APPLICATION

The Heavy Duty Cleaner is specially formulated to safely clean and maintain rubber and vinyl escalator handrails, and all types of stationary handrails that are badly soiled, or have not had regular cleaning. For ongoing maintenance, use Cleaner Conditionner TH0044.

INSTRUCTIONS

Moving handrails must be cleaned from the bottom entrance of an UP escalator, or the top entrance of a DOWN escalator. This will allow the moving handrail to dry before entering the return side of the handrail system.

1. Soak a microfiber pad in undiluted cleaning solution.
2. Lightly wring pad before attaching it to the lower pad holder.
3. Install a dry pad on the upper holder.
4. Allow handrail to run through the cleaning pads for at least 15 minutes. Periodically check pads for soil. Friction from heavy grease deposits may cause the system to safely move away from the handrail slightly. Heavy grease deposits from maintenance work should be cleaned by hand prior to using the Handrail Cleaning System.
5. Turn pads inside out to expose a clean surface, or replace with clean pads until they no longer pick up soil.

If turning a lower pad inside out, re-wet by spraying to avoid contaminating fresh solution.

PHYSICO-CHEMICAL FEATURES

Aspect:	liquid
Colour:	colourless
pH:	strong
Density :	1.00
Keep away from frost.	

PACKAGING

946ml bottle (box of 12) Ref. TH0045

PRECAUTIONS

For professional use only.
